ABOUT ORECORP:

OreCorp Limited is a Western Australian based mineral company with gold & base metal projects in Mauritania and Ethiopia.

MAURITANIA

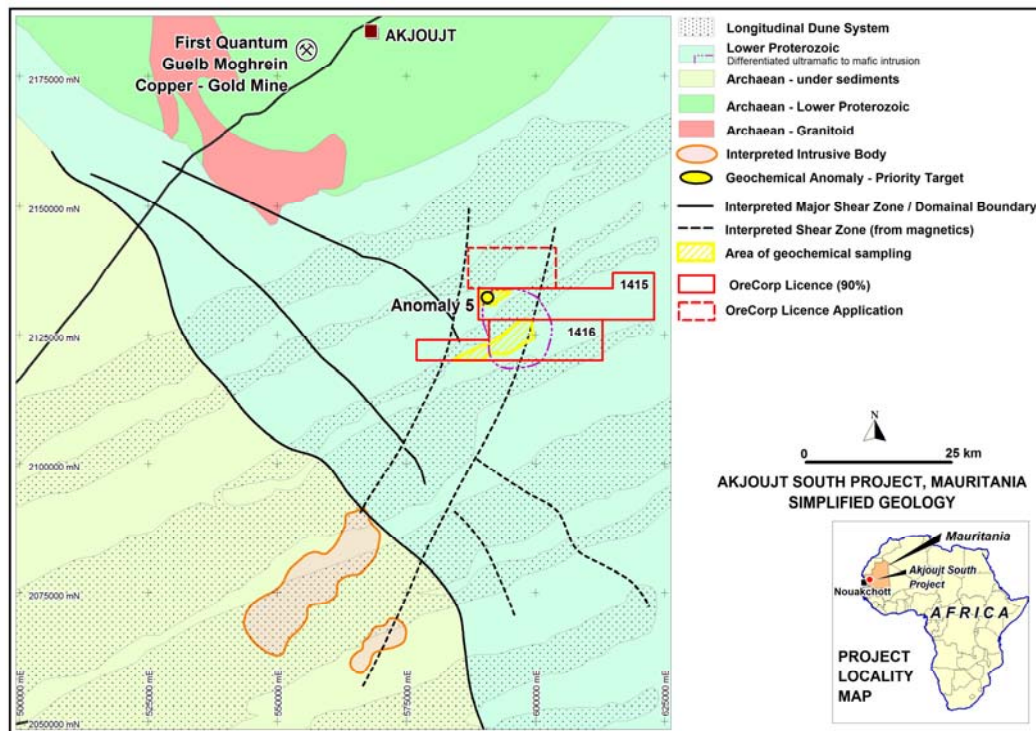

Figure 1: Akjoujt South Project, Mauritania

Akjoujt South Project (Ni-Cu-Au: 90% interest in Licences 1415 & 1416, currently under renewal)

The Akjoujt South Project comprises two licences (1415 and 1416). Renewal documentation, including a 25% reduction of the licence areas, was lodged during the June 2014 quarter for both licences. Once renewed, the licences will cover a total area of 460 km² (**Figure 1**). Recent communication from the Ministry indicates that the renewals are progressing. An application has been lodged covering the 136 km² immediately to the north of licence 1415 and Anomaly 5.

Anomaly 5 was identified in a regional soil sampling program which generated an anomalous soil sample of 0.26% nickel and 0.23% copper. The anomalism is associated with a circular intrusive body and alteration assemblage. Subsequent mapping, infill sampling and trenching has defined a zone of geochemical anomalism approximately 1.6km long. Trenching across this anomalism has intersected mineralised intervals of up to 160m in width of 0.24% nickel and 0.21% copper. Further mineralisation has been identified in Trench 9, three kilometres to the east (**Figure 2**).

Following the licence renewals, the Company intends to complete an induced polarisation (IP) chargeability and resistivity survey over Anomaly 5, which has the potential to host intrusion related disseminated nickel-copper mineralisation. It is anticipated that the survey will refine target areas as a prelude to potential drill testing. The survey parameters have now been defined and the Company is working with consultants to complete the work as soon as the licence renewal process is complete.

The survey will comprise high resolution dipole-dipole lines across the area of nickel/copper mineralisation identified from the previous trenching, as well as a regional gradient array survey covering an area to the northeast of the mapped intrusive, including the area of Trench 9 (values of up to 4m @ 0.44% nickel and 0.24% copper) and its associated geochemical anomalism. Targets identified from the gradient array survey may be followed-up with additional dipole lines (**Figures 2 & 3**).

ETHIOPIA

Yubdo - Ursa Project (Au-Ni-Cu-Cr-PGE: OreCorp 100% in Licences 243 & 244, currently under renewal)

The Yubdo – Ursa Project covers approximately 300km² (under renewal) of Ethiopia’s Western Greenstone Belt, adjacent to KEFI Minerals’ Tulu Kapi Project, which hosts a JORC resource of 1.9 million ounces @ 2.51g/t gold (refer KEFI Minerals’ AIM release dated 18 August 2014). Previous work by OreCorp has identified gold, nickel, chromium and platinum anomalism.

The Company continues to seek potential joint venture partners for Yubdo - Ursa. This process is on-going.

AUSTRALIA

Cheriton’s East Project (Au-Ni-Cu: OreCorp 100% in Licence E77/1223)

The Company is currently considering its options for this project. No work was completed at Cheriton’s East during the quarter.

CORPORATE AND BUSINESS DEVELOPMENT

The Company continues to pursue a number of project and corporate opportunities in Africa and elsewhere, with an emphasis on advanced projects. The Company is maintaining a disciplined and thorough evaluation approach to the opportunities it is assessing. Assessment of a number of opportunities is on-going.

Financial

OreCorp remains in a strong financial position with approximately \$6.5m cash and no debt.
